IRRIGATION

King Innovation got its start in Irrigation with King Drains and has since grown in the market because of a commitment to providing quality products. The Black Series Waterproof Connectors have been a constant in the industry and the DryConn brand has expanded to incorporate a variety of waterproof connector styles.

In 2017 King purchased Blazing Products, Inc., and is proud to now offer Blazing brand saddles, fittings and accessories.

ELECTRICAL

We at King Innovation are committed to safety. Electricians nationwide use DryConn Aqua Series Waterproof Connectors to ensure safe, waterproof connections, and use the AlumiConn® Aluminum to Copper Lug to protect homes and commercial buildings from the dangers of aluminum wiring. Gorilla Nuts® expand our Electrical offering, while maintaining our commitment to safe and quality wire connections.

GAS UTILITY

King Innovation’s interest in the gas utility market was spiked when we realized contractors needed a better solution for waterproofing underground tracer wire splices. Our DryConn Direct Bury Lug Yellow ensures safe, waterproof and corrosion proof underground connections without having to cut the main line maintaining the integrity of the communication signal.

CATHODIC

At King Innovation, protecting splices from harsh outdoor elements like water, temperature and corrosion is what we do best. In the cathodic market, we saw a need for an anode splice box to do just that, and our engineers developed the DryConn Visilock® with SmartGel® to meet this industry’s requirements.

WATER UTILITY

King Innovation’s interest in the water utility market was spiked when we realized contractors needed a better solution for waterproofing underground tracer wire splices. Our DryConn Direct Bury Lug Aqua ensures safe, waterproof and corrosion proof underground connections without having to cut the main line.

LIGHTING

Contractors in the irrigation industry have been using DryConn Waterproof Wire Connectors for years in landscape lighting applications. We have made a commitment to serving customers in this industry with our offering of the Insta-Light® and TreeLight Mount™.

UL 486D SAFETY

The UL 486D Listing is a standard of safety, a mark that guarantees reliable long-term waterproof connections. In fact, for wire connectors, it is the most difficult standard to meet. At King Innovation we maintain a research/development lab and manufacturing facility on-site in O’Fallon, MO to allow for rigorous testing and ongoing quality checks.

Why is UL so important to you?

**Liability**
Using a connector that does not meet the strict UL standard of quality means a huge liability risk. This risk is virtually eliminated with a UL 486D Listed splice.

**Quality**
When working with electricity, an unreliable connector is just not an option. A UL listing means safe splices... which means safe irrigation, lighting and electrical systems.

**Compliance**
A UL 486D connector ensures that you and your customers are in constant compliance with national and local electrical codes in wet, damp and direct bury applications.

What does King do to ensure quality?

**Testing**
The thorough DryConn testing process ensures that these connectors can withstand 2,200 VAC while submerged, are heat aged up to 90°C, and can endure cold down to -18°C... and that’s just the beginning.

**Manufacturing**
A controlled manufacturing process plus the use of superior materials allows DryConn connectors to meet stringent quality requirements. All processes take place in O’Fallon, MO for full visibility and regulation.

**3rd Party Audits**
Each quarter King is visited by a UL auditor who reviews the manufacturing processes to ensure our quality connector “recipe” is intact.

Never assume all connectors are created equally- that couldn’t be further from the truth. Do your research. For a guaranteed safe connection, count on DryConn.

**Dry-Crimp Connectors**

- Crimp style wire connector
- Copper crimp with protective housing
- Protective housing contains dielectric silicone sealant to protect and waterproof splice
- Holes in connector housing seal around wire to protect silicone from escaping and continuously encapsulate splice
- Two crimp sizes available to cover a wire range from #18 - #10 AWG
- Item sold with both filled and unfilled housing
- Silicone sealant also available sold separately
- Manufacturer approved for direct bury
- Quick, secure connections
- Allows installer to test connection prior to waterproofing splice
- For use in irrigation systems and low voltage lighting applications

Saddles
For Polyethylene & PVC Pipe
• The fastest self-tapping saddle
• For use on 3/4” to 1 1/2” poly or Class PVC pipe
• No clamping, coring, or cutting required
• Optimal sprinkler head flow, delivers more than 7 gallons per minute at 40 PSI and 12 Gallons Per Minute at 60 PSI
• Barbed fitting is a secure fit and easy installation without tools
• Made of high impact ABS

Ergonomic handle with 50% more surface area
to cushion fingers and provide maximum comfort
• #1 in comfort and durability
• No tools, fittings, or clamps needed
• Ergonomic hurricane handle provides comfortable, quick rotations
• Short thread design allows for the quickest, easiest installation possible without dirt or pebble clogging
• Patented cutting tip cleanly cuts polyethylene pipe for a tight seal every time
• Side snap latch provides a visible, secure connection
• Shorter working height requires less digging
• For both 80# and 100# 1” Poly Pipe

The goal of King Innovation’s “Know the Code” initiative is to provide information to the industry; keeping professionals informed of all requirements in order to reduce the risk of electric shock, corrosion, and product failures. King Innovation DryConn Waterproof Connectors are UL 486D Listed and comply with the 2008, 2011, 2014 and 2017 National Electric Code.

Compliance with the 2008, 2011, 2014 and 2017 NEC Code Book means when making a splice in a wet or damp location it is required that a UL 486D Listed splicing method be used. Basically, all outdoor electrical connections require a waterproof connector, even in waterproof enclosures.

The benefits for Electricians when using DryConn Waterproof Connectors:

- Installations are made according to the National Electrical Code
- Avoids costly rework due to failed inspections and/or warranty issues
- Avoids connector corrosion at the splice
- Reduces the risk of burnouts and fires
- Complete the job with confidence

**WHAT IS ELECTRICAL SHOCK DROWNING?**

Water can become electrified at any time. Pools and docks are surrounded by lights, pumps, boat lifts, etc. Faulty wiring, failed GFCI’s, or stray voltage can introduce electricity to the water where your family swims. When this low level AC current passes through the body with enough force to cause paralysis, THIS CAN RESULT IN DROWNING – ELECTRIC SHOCK DROWNING. PREVENT ELECTRIC SHOCK DROWNING BY TESTING THE WATER WITH SHOCK ALERT!

---

**WHAT IS SHOCK ALERT?**

Shock Alert is a device used to detect the presence of electrical voltage gradients in water that may be hazardous to service personnel, swimmers, or anyone that comes into contact with that body of water. It also may be used to locate the source of voltage in water.

---

**HOW DOES SHOCK ALERT WORK?**

Shock Alert has three probes on the base of the device designed to detect this potentially dangerous voltage gradient(s) in water. It provides a visual and audible alert to the existence of potentially hazardous voltage conditions in the body of water. Note that Shock Alert is a sensitive detection device that will detect small voltage gradients in water. Shock Alert can be used in fresh or chlorinated water. It may also be used in salt water pools. Shock Alert will detect voltage gradients in concrete, gunite and vinyl lined pools. DUE TO THE INSULATING EFFECTS, SHOCK ALERT IS NOT FOR USE IN FIBERGLASS POOLS AND HOT TUBS.

---

**WHERE SHOULD SHOCK ALERT BE USED?**

- Fresh or chlorinated water
- Salt water pools
- Concrete, gunite and vinyl lined pools
- Pools, around docks, or in fountains/water features
- Due to the insulating effects, Shock Alert is not for use in fiberglass pools and fiberglass hot tubs

---

**WHEN TO USE SHOCK ALERT?**

- Check when servicing pool
- Check after installation
- Check after winterization/opening pool
- Prior to anyone entering the water
- Check after renovations
- When conducting pool or water feature inspections
- If your customer has reported feeling a tingling feeling in the pool, dock or water feature
- Any time an electrical device is installed, serviced, changed or removed

---

**SHOCK ALERT PRO**

- Use the Shock Alert App to sync with the device to see voltage gradients in real time
- Export data for maintenance records and future access

We value innovation because it is who we are and how King got started. From the King Drain to DryConn Connectors to the series of innovations in our pipeline, we believe innovation is the creation and delivery of new customer value into the marketplace.

Comments like “it can’t be done” or “that will never work” are absent from our conversations at King. This way of thinking has given birth to a thriving organization after 55+ years.

We believe that having fun at work is a “best practice”. It is in the best interest of our customers, our employees and our company. This attitude keeps everyone on their toes and adds an element of diversity, joy, spontaneity, and a dash of healthy unpredictability to every day.

We’re a little geeky that way. Our customers are insanely important to us. Our customers’ problems are a close second. When it comes to our customers’ complications, predicaments, troubles, and problems, we humbly say, “BRING IT.”

It started with Lloyd King Sr when he would tell his son, Herb, “There is always a way.” Today, we take that statement as a challenge to never accept the status quo as the best way. Engineering? Production? Accounting? Sales? Our Customers’ Problems? It doesn’t matter. We are intensely passionate about challenging the status quo.

We believe that taking personal responsibility for everything we do fosters a deep sense of trust with our team members, partners, and customers. We believe that Personal Responsibility is deeply American and has provided the strong foundation that our country needs to continue on its path of prosperity.

We believe that quality is an expression of how we think, who we are, how we make things, and ultimately what we offer our customers. More than just an evaluation of how good a product is or how long it lasts, we love the fact that quality starts with the way we think and we achieve excellence through continuous improvement of our products, processes, communications and services.

We understand that risk taking can, well, be risky! However, we understand that without taking calculated risks, King wouldn’t be where we are today. We believe that failures can be learned from and used to grow stronger.

Entrepreneurs take personal responsibility for their work. They are always thinking about the current and future needs of their customers (both internal and external). Entrepreneurs are innovators, no matter what position they hold.

We firmly believe in the Entrepreneurial Spirit and what it does for us personally, as an organization, and ultimately for our country.

Perseverance is often defined as “steadfastness in doing something despite difficulty or delay in achieving success.” We have the determination to see it through. Don’t bet against us.
